

Saddle Oaks Gate Operating Instructions

Revised 02-09-21

Visitor Entering Subdivision

There are two ways of gaining access as a visitor:

1. The visitor can push the up & down arrows on the keypad until your last name appears on the display. When your name appears on the display, the visitor then pushes the “phone” button on the keypad. This will place a call to your house or cell phone, whichever you have provided. When you receive the call, you can talk to the visitor for up to 20 seconds to verify you are expecting them and want to give them access. To grant them access at any time during this call, you can press and hold the “9” button on YOUR phone for at least one second. You will here several short beeps and the words “access granted” on your phone to confirm that the gate is in fact opening. **Make sure the phone you are answering the gate call from actually generates a tone the entire time the “9” button is pressed.** Some cordless, and cell phones only generate a short tone, which is not long enough to trigger the gate to open.
2. The visitor can enter YOUR four digit access code on the keypad. Care should be given to who you provide this code to. It’s basically like giving someone the key to our houses.

Home/Property Owner Entering Subdivision

While you can use the above mentioned methods, we would prefer that you use a remote, sometimes referred to as a “clicker”, to enter the subdivision when the gate is closed.

If you do not have a remote, they can be purchased from Overhead Door for \$40 each. Amazon, search for “MULTI-CODE 3089” or “Linear 3089”

Linear 3089 Multicode 3089
Compatible Visor Remote Opener
★★★★☆ ~ 6,381
\$15⁴⁸ ~~\$46.23~~

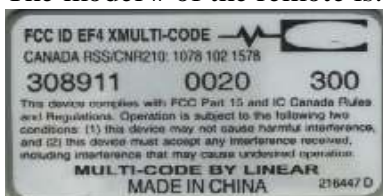

2 Pack 3089 Linear Multi-Code
Remote Transmitter Gate Garage
